

Fact Sheet: *E.coli*

What is *E.coli*?

E. coli (*Escherichia coli*) are bacteria that normally live in the intestines of animals and humans. There are many strains of *E. coli* bacteria. Most are harmless and play an important part of a healthy human intestinal tract. However, one particular strain, *E. coli* O157:H7, may cause serious illness in people by making a toxin called Shiga toxin.

Signs and Symptoms

- Stomach cramps
- Diarrhea that may contain blood
- Severe infection may lead to kidney problems

Symptoms appear from 2 to 10 days after exposure, with an average of 3 to 4 days. An adult infected with *E. coli* is contagious for approximately 7 days. However, children may be contagious for up to 3 weeks.

If you are a food service worker, a health care worker, or a childcare worker, report your illness to your supervisor and do not work until your medical provider says it is OK.

**Be Food Safe.
Separate.
Do NOT Cross
Contaminate!**

How is it spread?

- *E. coli* can be spread to people through consuming raw or undercooked beef.
- It can also be spread by consuming contaminated water or foods such as melons, lettuce, spinach, apple cider, coleslaw, alfalfa sprouts, or unpasteurized milk.
- Infected individuals may spread the illness to others by not washing their hands well after a bowel movement or contact with animals.
- *E. coli* can also spread from contaminated drinking or recreational water.

Treatment

- If you think you have been exposed, call your health care provider immediately for a stool sample test and treatment recommendations.
- Drink plenty of fluids to prevent dehydration.

Prevention

- Wash all fruits and vegetables thoroughly before eating
- Fully cook ground beef products to **160 degrees Fahrenheit**
- Wash hands after handling ground beef and wash all utensils that have been exposed to the raw meat.
- Reduce cross contamination by using separate cutting boards for raw meat and vegetables. Disinfect cutting boards.
- Keep thawing and uneaten cooked foods in the refrigerator
- Do not consume raw milk, raw milk products, or any other unpasteurized product
- Wash your hands after going to the bathroom, changing a diaper, working with animals and before preparing or eating food
