So you have been fully vaccinated...

NOW WHAT?

- You can gather indoors with fully vaccinated people without wearing a mask.
- You can gather indoors with unvaccinated people from one other household without masks.
- If you’ve been around someone who has COVID-19, you do not need to stay away from others (quarantine) if you are following testing and masking recommendations. The CDC recommends that those who are fully vaccinated and exposed to COVID-19 be tested 3-5 days after known exposure. You should wear a mask in public indoor settings until you receive a negative test result or for 14 days if you do not get tested.
- Fully vaccinated people can travel within the United States and COVID-19 testing or post-travel self-quarantine are not required as long as they continue to take COVID-19 precautions while traveling and do not show COVID-19 symptoms.

Continued Safety Measures

You should still take steps to protect yourself and others in public:

- **Wear a mask.**
- **Stay at least 6 feet apart from others.**
- **Avoid crowds and poorly ventilated spaces.**

International Travel

- Fully vaccinated people can travel internationally without getting a COVID-19 test before travel unless it is required by the international destination.
- Fully vaccinated people do not need to self-quarantine after returning to the United States, unless required by a state or local jurisdiction.
- Fully vaccinated people should still have a negative COVID-19 test result before they board a flight to the United States and get a COVID-19 test 3 to 5 days after returning from international travel.
- Fully vaccinated people should continue to take COVID-19 precautions while traveling internationally.

**Remember...**

You are not considered fully vaccinated until 2 weeks after your final vaccine.
